

Master's
Theorem

$$T(n) = a T\left(\frac{n}{b}\right) + c$$

step 1: Note Δ, b, c

step 2: calc $(n \log a \Delta, c)$

Step 3 : if $O(n^{\log_3 4})$, C is some

then ans is $C \log n$

if $\alpha(n^{\log_3 4}) > C$

then ans is $O(n^{\log_3 4})$

else ans is $O(C)$

$$T(n) = n^3$$
